About INPUT

INPUT provides planning information, analysis, and recommendations for the information technology industries. Through market research, technology forecasting, and competitive analysis, INPUT supports client management in making informed decisions.

Subscription services, proprietary research/consulting, merger/acquisition assistance, and multient client studies are provided to users and vendors of information systems and services. INPUT specialises in the software and services industry which includes software products, systems operations, processing services, network services, systems integration, professional services, turnkey systems, and customer services. Particular areas of expertise include CASE analysis, information systems planning, and outsourcing.

Many of INPUT's professional staff members have more than 20 years' experience in their areas of specialisation. Most have held senior management positions in operations, marketing, or planning. This expertise enables INPUT to supply practical solutions to complex business problems.

Formed as a privately held corporation in 1974, INPUT has become a leading international research and consulting firm. Clients include more than 100 of the world's largest and most technically advanced companies.

The first part of the paper discusses the importance of understanding the cultural context of the research. It highlights the need for researchers to be sensitive to the values and beliefs of the communities they are studying. This is particularly important in the field of health care, where cultural differences can significantly impact patient outcomes and the effectiveness of interventions.

The second part of the paper focuses on the methodology used in the study. It describes the process of selecting participants, collecting data, and analyzing the results. The authors emphasize the importance of using a mixed-methods approach, which combines both qualitative and quantitative data to provide a more comprehensive understanding of the research topic.

The third part of the paper presents the findings of the study. It discusses the results of the qualitative interviews and the quantitative survey data. The authors note that there are significant differences in health care utilization between different cultural groups, and they provide examples of how these differences manifest in practice.

The final part of the paper discusses the implications of the findings for health care practice and policy. It suggests that health care providers should be trained to recognize and address cultural differences in their patients. Additionally, it recommends that health care systems should develop culturally sensitive programs and services to better serve diverse populations.
